Calvin Capital

From day-to-day support to large scale business-critical projects, Calvin Capital rely on CyberLab to connect their people and protect their data.
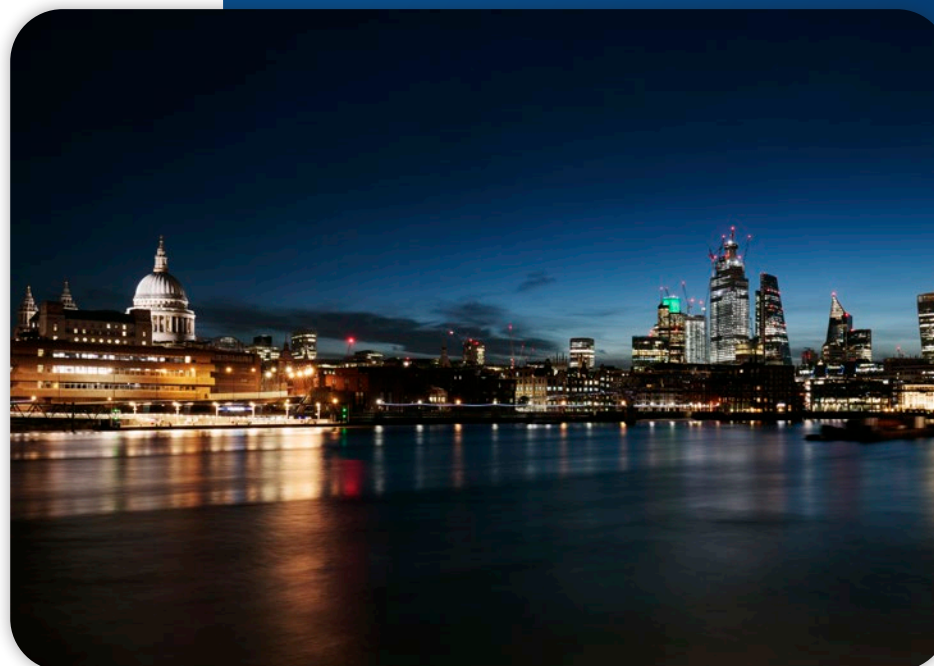

Sector Energy

People 80+

Solutions Managed Support, Professional Services, Microsoft 365, Microsoft Teams and Chess Teams Voice

Calvin Capital is a leading owner and manager of essential energy infrastructure assets. It is a highly competitive and forward-thinking organisation, and a significant player in the market that is making cleaner and more sustainable energy accessible to all.

Calvin Capital have worked with CyberLab and our sister company Chess ICT successfully for over three years, with the team at Calvin Capital benefiting from CyberLab's expertise across a range of technologies.

The Challenge

Calvin Capital is always looking for ways to improve their operational efficiency, technical capability, and profitability.

Nadeem Shafi, Calvin Capital's Head of IT, had a clear vision to drive and support the business move to the modern workplace. This includes supplying their people with devices they enjoy using, office applications and platforms that help them collaborate efficiently, and meeting rooms equipped with video and audio conference technology, all protected with robust security measures.

The Solution

Calvin Capital awarded our sister company, Chess ICT, a renewed contract to supply Managed Services support, giving Nadeem and his team additional resource to call upon when supporting their people on a day-to-day basis.

At the same time, CyberLab conducted a M365 Security Assessment, to help implement security best practices with Microsoft 365. This included a Secure Score Review, and a gap analysis highlighting the areas to focus on. Nadeem and CyberLab explored how security features within Microsoft could help keep company data secure, and Calvin Capital are now rolling out a migration to M365 E5 licences for all their people.

By equipping team members with Microsoft Surface Pros, Chess ICT ensured that they team have devices that they enjoy using, and that have the functionality they need to drive productivity. Chess also continued their support with Calvin Captial's telephony system, setting up Teams Voice, a unified communications platform that enabled Calvin's staff to communicate seamlessly from any location.

The Outcome

Nadeem and his team work with Chess ICT and CyberLab on a daily basis, as well as on specific individual projects, to help ensure their short-, medium– and long-term objectives can be met.

"We have a very open and productive relationship with Chess ICT and CyberLab, and they're always really responsive when we have questions or suggestions. Being able to tap into knowledge and expertise that we trust across a wide range of technologies really helps us to keep moving forward. It's a real partnership."

Nadeem Shafi,
Head of IT, Calvin Capital

Managed Security Support

Penetration Testing is a way to identify vulnerabilities before attackers do, evaluate how effectively you can respond to security threats, assess your compliance with security policies, and improve the level of security awareness amongst your staff.

Our team of CREST, CHECK, and Cyber Scheme approved engineers undertake ethical attack simulations to uncover areas of concern in your infrastructure, policies, and procedures.

Using a third party to test your systems allows them to 'think like an attacker' and bring a fresh perspective to pinpointing weak points in your defences and highlight areas that can be improved using your existing security technology.

Incorporating regular testing into your planning helps you to stay on top of your security posture, preserve your brand, and maintain regulatory compliance to standards and regulations including GDPR, PCI DSS, and ISO 27001.

Cloud Security

The rapid adoption of cloud-based applications and storage creates complex environments and opens new avenues for unauthorised access to your network and data, especially when combined with on-premise and legacy infrastructure.

We will review your identity & access management policies, password management, disaster recovery plans, implement multi-factor authentication, VPN solutions, and enterprise-grade encryption.

We can configure Microsoft 365 to help your people adopt security best practices as they adapt to a new environment.
