

# 10 Steps to Cyber Security

Enhance your cyber security posture with our **10 essential steps**, built on guidance from the National Cyber Security Centre (NCSC).

## Step 1 | Risk Management

Do you have a documented cyber risk management strategy in place?

## Step 2 | Engagement & Training

Do you have a reliable cyber security training strategy for your users?

## Step 3 | Asset Management

Do you have an effective management solution in place for all endpoints, mobile devices, and servers?

## Step 4 | Architecture & Configuration

- 1 Are you able to manage and maintain your systems securely?
- 2 Have you applied a defence in depth security approach?

## Step 5 | Vulnerability Management

Do you regularly run vulnerability scans to detect vulnerabilities in your environment?

## Step 6 | Identity & Access Management

- 1 Do you have appropriate identity and access management policies?
- 2 Have you implemented multi-factor authentication for all user and admin accounts?

## Step 7 | Data Security

Are you able to place restrictions on sensitive data to prevent accidental or unauthorised dissemination?

## Step 8 | Logging & Monitoring

Do you have an analytics tool that ensures visibility of any changes made to your data?

## Step 9 | Incident Management

Do you have effective cyber incident response plans that are fully understood by stakeholders across your organisation?

## Step 10 | Supply Chain Security

Do you assess the risks posed to your cyber security by each of your suppliers?

Understand your security risks and how to fix them!
