Best Practices

Geopolitics and the Modern Cyber Threat Explained with Guardsix

Assume Identity is Compromised

Attackers don't break in anymore. They log in. Design controls accordingly.

Contain the Blast Radius

Prevention isn't enough. When the attacker is inside, what stops them spreading?

Kill Telemetry Blind Spots

You can't defend what you can't see. Map the gaps, then close them.

Signal Quality Beats Volume

800 detections won't save you. The right ones, with the right quality, will.
