Best Practices

Secure by Design Explained

Built In, Not Bolted On

Secure by Design builds security into your architecture from day one, not after.

Ask "What Would An Attacker Do?"

Threat modelling makes you think like an attacker before you write a line of code.

Vibe Coding Has A Blind Spot

AI can build an MVP in an afternoon. Nobody's checking if it's actually secure.

Fast and Secure Aren't Opposites

Late fixes slow projects down. Building it right first is what makes speed possible.
